

ΕΦΗΜΕΡΙΣ :
OR, A
DIARY

{ ASTRONOMICAL }
AND
{ ASTROLOGICAL }

For the Year of Grace 1663.

CONTAINING

- I. The Motions and Aspects of the Planets, Eclipses of the Luminaries, Full sea, Mutation of the Air, &c.
- II. An Enquiry into such Accidents as may befall these Islands the ensuing year : with some Reflections on the great and famous Conjunction of Saturn and Jupiter Octob. 10. which happens but once in 795 years.
- III. A Demonstration of the truth of Astrologie in six Arguments : with many other profitable Observations.

To
The most worthily Accomplished,
And
Eminent Honorer of Arts & Sciences,
FRETSWALD HOLLES Esq;

JOHN GADBURY,
In testimony of the Honour he bears
unto his Vertues,

Humbly presenteth these his

{ ASTRONOMICAL }
And
{ ASTROLOGICAL }
Endeavours.

The Use of the B o o k.

Every Month contains two pages; a Right, and a Left.

The Left-hand-page Explained.

This page consists of 12 Columns. 1. The Month-days.
2. The Week-days. 3. The Festivals. 4. The Suns place.
5. The place of Saturn. 6. The place of Jupiter. 7. The
place of Mars. 8. The place of Venus. 9. The place of
Mercury. 10. The Moons place. 11. The place of the Dra-
gons head: all in Longitude, as they are by Calculation
found in the Ecliptick. 12. The mutual Aspects and Wea-
ther. At the top of this page, are several Poetical passages
alluding to the influences of the Coelestial Bodies in each
Month.

The Right-hand-page unfolded.

This page is furnish'd with eight Columns. The first con-
tains the Month-days: the six next, the Moons Aspects to the
Planets: and the eighth shews the hour and minute of Full
Sea at London-bridge every day. Over the head of these, are
placed the several Lunations; being conceived of more Vul-
gar use then the Column of the Moons Aspects to the Sun.

Vulgar Notes.

King James.	1566	March 24 1602	22 0	March 27 39
Charles 1	1600	March 27 1625	23 11	January 30 15
Charles 2	1630	January 30 1648		

God save the KING.

*If Kings are Gods belowe, be then must be
Accused of the highest Blasphemie
That speaks or thinks them ill: but he that acts,
[And by bad Patterns, commits horrid Facts]
He runs the Road to hell! and (at his cost)
May finde his soul, shall finde his labour lost.*

What part the Moon governs in Mans body, being in any of the Twelve Signes.

♈ Mans Head and Face; Heavens Ram obey;
 ♉ His Neck, the Neck-strong Bull doth sway;
 ♊ Th'arm-twining Twins guide Hands and Arms;
 ♋ Brest, Sides and Stomack, Cancer charms;
 ♌ The Lion rules our Back and Heart;
 ♍ Bowels and Belly's Virgo's part;
 ♎ Reins, Haunches, Navil, Libra friends;
 ♏ Bladder and Secrets, Scorpio tends.
 ♐ The Half-hors'd Bow-man claims the Thighs;
 ♑ And to the Kid our Knees suffice.
 ♒ Our Legs are but the Butlers Fees:
 ♓ The Fish our Footsteps oversees.

The Planets Characters.

♄ Saturn	☉ Sol	☾ Luna
♃ Jupiter	♀ Venus	♉ Dragons Head.
♂ Mars	☿ Mercury	♏ Dragons Tayl.

The Characters of the Aspects.

♂ Conjunction.	♌ Opposition.	☐ Quarrile.
* Sextile.		☿ Trine.

January hath xxxi days.

The Year begins well : the blest Trinity
Are kinder to us then our selves can be :
They know our wants ; they know when to supply ;
They know what's fit to grant, what to deny..
Planets themselves can't wander from their will,
And for this month prognosticate no ill.

No more, *Flambello*! cloud thy brazen brow:
Must Truth be out-law'd? Not thy Errors too?
England, beware: Foxes may spoil thy Vine;
And some now strive to adulterate the Wine
Thou labour'st to correct: But let them know,
They work their ruine, seek thy overthrow.

Bless us (good God!) from
another unseasonable Spring;
and from intestine Jars and
Quarrels: from Disobedience
to our Superiours, and from
Flatteries and Sycophantique
Practices, like the Jews of old,
who one day cryed *Hosanna*,
and the next, *Crucifie*. Let the
Adversaries to *Englands* peace
be discovered; and let not
Hoods make Monks among us:
i. e. Let not the feigned pre-
tences of some, be valued be-
yond the worthy actions of o-
thers.

And although *Jupiter* this
month be Squated three times,
yet let the Clergie be honour-
ed, and the Service of the
Church be followed. And let
all know, that *St. Cyprian* urg'd
a home Truth, when he said,
*Non habet Deum Patrem, qui
non habet Ecclesiam Matrem.*

Eclipses Solis inconspicue.

March hath xxxi days.

London! great Chronos station points at thee,
And doth denunciate infelicitie
Unto thy Children: Merchants feel the smart,
So do thy Trades-men too, in every part.
Thy Seniors stoop; thy Honours do abate:
And thou must be content; for 'tis thy Fate.

Saturn stationary near the 17 or 18 degree of Sagittary, (opposite to the Ascendent of London) makes divers persons of this Nation to perform all their actions (like Caesar's Sacrifice) without heart. But the Sun's Trine toward the end, will help to alleviate their terrors.

This 14 day, about midnight, the Moon may be seen with the Virgins Spike ascending toward the Medium Coeli, or South Angle. And Jupiter and Saturn a little after may be seen to accompany each other in the East.

April hath xxx days.

The severall Trines the fruitful *April* bears,
May yeeld us Wheat, in stead of useles Tares ;
And so remit (for some small time) the threats
Of angry *Chronus*, and his rigid fates :

But they'll return again, ere we be eas'd ;
" For fullen Natures are not soon appeas'd."

God grant the Plague, or some
such-like distemper, do not now
begin to rage, chiefly in the East-
parts of the Citie. Well may
the traders of the world complain,
when Trade it self decays. Nor
will the Merchants of this great
Citie have cause to boast of their
gains ; rather (in my opinion)
to be sorrowful they are so small.

About an hour before the Sun
rises, ☿ and ♋ may be seen in
Conjunction, in the East.
It is a Conjunction very rare
to be seen ; and therefore
richly worth the notice.

May hath xxxi days.

April was not so kinde, but May's as cross,
And in her Aspects (nearly ten times) worse.
The Stars oppose each other; and so darts
Their sharper Influence at poor mortals hearts:
Whence Sickneses and other mischiefs grow:
Oh! that we could prevent, as well as know.

Non est in Medico semper relevatur ut aeger:

Interdum Docta, plus valet Arte malum.

That is,

The Doctor cannot always help the ill:

The sickness sometimes is beyond his skill.

At nine of the clock this evening, the Moon will approach the bodies of Saturn and Jupiter; she being but a little removed from Antares, or The Scorpions heart. It will be in the East, and very pleasant to observe.

June hath xxx. days.

Last June, heav'ns frown'd ; but here they gently smile,
And court the earth with *Halcyon*-days, a while :
Anon, they send their friendly gales, to fan
Distempers from the troubled heart of man.

Corn ripens apace ; and *England* now may cry,
" *Juno's* a Goddess of Fertility.

On the 8, about 9 or 10 at night, the Moon will be seen in Conjunction of the benign Planet ♈ ; and ♈ may be seen also, a little to the East of them both. Near the hour of 11, they all three will be seen in the Meridian, or heart of heaven.

Halv de judiciis Astrorum, fol. 329, saith, The ☿ of ♈ and ☿ denotes, — accident hominibus multa placita, & unius suspicionem concipiet de alio furti, &c.

July hath xxxi days.

'Tis strange the verdure of the last moneth good,
Should be by men, no better understood :
And yet not strange; if th' late nefarious Time
Be call'd to minde; wherein 'twas held a Crime
Goodness to act. Here the most shameless Sins
The moneth doth end, continues, and begins.

The ☐ of ♂ and ♀ signifies
multas fornicationes, & magnam
cupiditatem inter mulieres detegen-
tur, & ferent insultus vel molestias
ratione fornicationum. Haly, fol.
393.

August hath xxxi days.

The Moon the eighth day veils her silver head,
Just as bright Sol steps in his Western bed :
She skreens her beauty with Earths blacker staff,
As if asham'd to see his Mantle off.

Thus Nature Lectures reads of Modesty;
Inviting men to learn of them on high

Moon eclipsed visible.
Proclus saith, An Eclipse of
the ☉ in the last decad of
♊, animates the mindes and
inelinations of men to insta-
bility, and makes them run
after Noveltries.

Eclipse Solis inconspicua.
On the 29 day, about eight
at night, the Moon may be
seen in the West, between
the bodies of ♋ and ♊, if
clouds do not interpose.

September hath xxx days.

The Planets sev'ral friendly Rays do bring
Content unto the People, Priest and King :
The Learned now are honour'd ; and do gain
Preferment too ; as price of Studies pain.

Had I a *Joshua's* power, the Sun should be
(Great *Jove*) in Sextile always unto thee.

		The Planets Diurnal Motions. Mutual A-										Spects and Weather.

♀ is now a very glorious ebe-
ning-Star, she being occi-
dental in her greatest di-
stance from the Sun.

The * of ☉ and ♀, significat
quod Lex & Sapientia erit appa-
rens & manifesta, & quod erunt
honorati & in pretio habiti Sapi-
entes, & maxime illi Legis : Haly
dixit, in Judic. Astr. fol. 392.

Let Sword and Shield give place
to Gown,
And give the Tongue the Law-
rel Crown.

Cedant Arma Toge.

October hath such days.

*Tis ten to one, but that some Prog-men will
(According to their shallow minute skill)
Threaten the world, with Rapine, Wars, and Bloud,
(And other things themselves ne'er understood)
Upon this great Conjunction: when (poor men)
They ne'er did see the like, nor shall agen.

Conjunction magna ♈ & ♀.

It happens but once in seven or eight hundred years; its effects therefore cannot be discovered by the wisest of mortals. We may say, They will be famous: but what they shall be, or when they shall appear, Astrologic hath no tongue to declare. Let us therefore warily eye the Providence of God in those Mutations, (whether good or evil) that this eminent and unusual Congress is the precursor of

I know Haly saith, -- *Quando ♀ jungitur cum ♈, significat mortem Regis magni & potentis, & multas locustas.* But he speaks onely of ordinary Conjunctions, which happen once in twenty years.

November hath xxx days.

If Authors speak but true, this month will be
An Usher of most happie Harmony
Unto all sorts of persons: Kings will strive
Both Law and Justice to preserve alive:
Mean men obedient are; lyes and deceit
They shun; and aim at things of better weight.

☉ in ☉ ☉ significat quod Reges
docebunt legem & rectitudinem, &
judicabunt per eas; dixit Haly,
393.

From the ninth day to the 20,
the fiery Planet ☉ may eve-
ry night be seen in conjun-
ction with that glorious
Star called *Banlon*, or
The Lion's heart. ☉ the 12, at
or about 4 or 5 in the Morn-
ing, they will be seen in con-
junction partilly, nere the
Middle or heart of Heaven.

Quum Sol jungitur cum Saturno.
significat quod mendacia & dece-
ptiones removentur ab hominibus
Haly.

God grant my Author to be
in the right, in this Prediction

December hath xxxi days.

Thus have I run my Stage, long as the Year,
To perfect others in this Princely way:

If I am blam'd for following Truth too neer,
I can avoid it in my next Essay.

Yet let such know, that at the Truth repine,
The Oar is richest, that's without the Myne.

The Quartile of Mars and Mercury will incline the minds of nimble-witted fellows to actions of Knavery; as, counterfeiting Moneys, forging Writings, and Cozenages of all sorts and sizes. And some of these Cheats may be piously performed too; Sanctity may appear in his face, that hath nothing but Villany in his heart. ☐ is in ☐ in domo Jovis.

This 15 day, about five in the morning, the Moon will be seen with ☐ in the East, but separating from her body: yet, they both having great North-latitude, will seem (to the eye) as if they were in exact Conjunction. It is a Congress worth a Telescopical observation of the industrious Astronomer.

A

A general Judgement on the Year 1663.

Judicium Astrologicum.

Astrologers tell us, — Luna & dominus Amici ostendunt populos; Sol & Decima, Reges; Jupiter & Nona, Ecclesiasticos. Incert. Auct. Aphor. 246. If so, then are Princes and their Subjects likely to agree this year; the one aiming at acts of indulgence and kindness; the other, at acts of obedience and loyalty. For here in this Figure, the Sun is

The Part of the Year predicted.

Lord of the year, and Significator of Kings and Princes also. Besides, Venus is in the tenth, in Conjunction of Mercury, and Trine of Luna and Jupiter; which will incline Magistrates to mercy: and the Moon is in the Dignities of the Sun in the second House, thence in Trine of Saturn and Jupiter; declaring, how much Obedience and Duty adds to the advantage of the Commonalty in general.

Haly, speaking of the several Planets governing the year, they being well disposed, as the Sun is in this Figure, saith: — *Et si Sol talis fuerit, justitiam regis & pietatem & mercedem & bona facta significat*, fol. 365. And when Princes shall be just, and merciful, and pious, if People will not be obedient and quiet, — *fiat justitia; Let their Protections be voted down, without a Parliament!* But Hermes (as quoted by Haly, for I have not his Book my self) puts us in good hope that the People will have other prevailing Reasons to be quiet and peaceable, (although not better) besides the Piety, Clemencie and Justice of their Governours: His words are these: — *Si quando ♄, & ♀, & ☿, ac ☽, fuerint juncti, significat bonum statum hominibus, ubique lucra multa, fertiles pluvias, &c.* Haly, pars 8. Cap. 5. They are not (it is true) in Conjunction all of them; but their Beams are united to each other by the most noble of Aspects, the Trine: Ergo, the Aphorism is fully as effectual for the good of the Commonalty, as if they had been in Conjunction: and it is common among Astrologers to understand the word *Conjunction*, an Uniting, either by Beams or Bodies.

Having been brief on this Theam, I come to consider Jupiter and the ninth House; which in this Revolution, hath fully the signification of Church-men: and I am apt to believe they will not escape the malice and venom of malignant Tongues this year; for Mars and Cauda Draconis are posited in the ninth House: and this the rather, because Mars is in Quartile of Jupiter therefrom. Howbeit, Jupiter having the disposal of him, and he being in Reception of Venus, and the Moon in Trine of Jupiter also, the Clergie will flourish and be honoured, (as they do deserve to be) and their Enemies will come within the verge of their power, and be compelled to cry *Pecadumini* for their insolent Injuries, and reasonless Hatred and Contempt: and this I am the more persuaded of, because

The state of the Year predicted.

Faly saith, (and without doubt he had reason for his assertion) *Jupiter junctus cum Saturno, prohibet omne malum*, Haly fol. 361.

And now I am speaking of *Jupiter* and *Saturn* their being conjoyn'd, give me leave to acquaint you, that the Conjunction they now make, is a great Conjunction indeed; and so without doubt will be attended with great and famous Effects: but what Effects those shall be, the wisest of Mortals must of necessity be to seek in; for it is a Conjunction that happens but once in seven or eight hundred years, if we may credit *Cardanus*: (if not, take we but the pains, and we shall easily prove it our selves.) *Cardan* in his Comment, on *Plolomy*, &c. saith, — That the Conjunction of *Saturn* and *Jupiter* from *Aries* to *Aries*, is but once in 795 years; regard being had to the change of the *Trygon*, [and it is the very same term of time from *Sagittary* to *Sagittary*.] and the change of their Conjunctions from one *Trygon* to another, happens but once in 199 years. This Discourse of *Cardan*'s, is excellently well rendered in English by my learned friend *Capt. George Wharton*, in his *HEMEROLOGIUM* for the year 1656. unto whom I refer those that have not the happiness to meet with *Cardan*.

Howbeit, it is ten to one, but we shall have some busy Astrologers be buzzing into the Ears of the world many strange Effects to ensue herefrom; and it may be, they'll be so bold as to name them; when alas! it is impossible for them to have any experience of what Effects can attend it. If they shall say, History or Chronologie tell them so and so it fell out seven or eight hundred years since, after such a Conjunction, which may reasonably be thought the Effects thereof: I shall tell them again, That Eclipses, or other Conjunctions or Revolutions, &c. may signify them, for any thing they can object to the contrary. What reason then can they have, to attribute such kind of Effects to such a great Conjunction? Again, I should allow a probability of truth in this their far-fetched Guess; they may be still conceived to shoot wide the Mark, and be caught with a non-cause in the stead of a true cause, for, to pretend to set a Figure of such a Conjunction, can be no less then the highest of presumptions in any; and to pretend to give Judgement without a Position, cannot but be gross Ignorance, if not palpable madness.

The state of the Year predicted.

My worthy friend, *Mr. V. Wing*, in his *Ephemerides* speaking of this famous Conjunction, saith, — To erect a Scheme of Heaven at the time of this Conjunction, is too great a Curiosity for any to attempt: for if we do but judiciously consider the great difficulty in observing the true places of the Stars and Planets with Instrument, we shall have such niceties; for I am confident the most curious Observer upon the earth, though his Instrument be never so large and exquisitely divided, yet may fail two or three minutes at sometimes, in taking the place of a Star, as *Tycho* himself hath sundry times experienced; who with his Co-adjutors and Assistants, did usually make several Observations at once, in different places, about taking the Longitude and Latitude of one and the same Star: so that hence the Tables built upon Observations, must of necessity fail somewhat of truth, though not so much, being directed by an able Artist. As in this Conjunction, should we fail but one minute in the place of each Planet, we should miss of the time of the Conjunction, no less then eight whole hours; which with the best Instrument that can be used, is so little discernable: the further proof whereof, I leave to the consideration of the Judicious, but not to the fanatics of every vulgar Practitioner. *Veritas odium parit*. Thus far *Mr. Wing*. Besides, should those Pretenders have it granted them, that a Figure hereof were to be obtained, (which you see is absolutely impossible) yet I would know of them what measure of time they would follow, in appointing the Effects thereof to initiate, continue, or conclude? It were unreasonable to assigne such a measure of time, as in Eclipses; and every while as idle, to give the same time to agree therewith, as doth in Nativities, viz. a degree for a year. If we should observe the same measure to be good in great Conjunctions, as in Eclipses, and take the Solary, viz. an hour to signify a year, look how many hours those two Planets may be in Conjunction, for so many years must their Effects continue. In this one Conjunction, we have now under discourse *Saturn* and *Jupiter* will not be separated one degree in 20 days: if then we multiply 20. by 24. the product will be 480. and hence the Effects hereof should remain as many years. But should we assigne another manner of measure in their Effects, which may better con-

Of the Eclipses this Year 1663.

lost with Reason, viz. as in Eclipses of the Sun, an hour for a year; and those Eclipses commonly happen every year: so in these Conjunctions, they happening but once in (near) 800 years, if we should assigne for every hour they are in conjunction, as many 800 years; In what Revolution of time could the world hope to see a period put to the effects of one great Conjunction?

Of Eclipses this Year 1663.

FOUR Eclipses will this year happen; two of the Sun, and two of the Moon. But the two Solar Eclipses will not be visible unto any part of Europe; whereas the Lunar defects will be conspicuous unto most parts thereof, as well as England in particular.

The first Eclipse will be of the Moon, on Thursday the 12 of February, in the morning.

The Beginning	} of the Eclipse is	} 13 31 45	} P. M.			
The Middle				} Febr. 11.	} 15 8 7	
The Duration						} 16 44 29
The End						
Digits eclipsed						

This Eclipse begins in the tenth House, and ends in the eighth. God grant it be the precursor of no Mortality; &c.

The second Defect will be of the Sun, on Friday the 27 of February, in the afternoon; and will be visible in the South parts of the earth in *Magellanica*, towards the Antarctic Pole, and such places that are unknown to us.

The third, is of the Moon; and will be visible and total; (though not Central) it may be seen at London on Aug. 8. in the evening.

The Beginning	} of the Eclipse is	} 6 21 37	} This			
The Middle				} total darkness	} 8 7 46	
The End						} 9 53 55

That Astrologie is demonstrable.

This Eclipse begins in the Ascendent; it periods in the eleventh House. It seems thereby to intimate the breach of Leagues, Amity, and Friendship, amongst many, and raise up many durable Enemies in the room thereof. It happens in *Aquary* a fixed Signe, and in the House of *Saturn*.

The last is of the Sun, and happeneth on Aug. 22. in the evening; but will be inconspicuous to us, because the Luminaries are both under the earth: yet it will be visible in *nova Francia*, *Granada*, and in the places bordering upon *Virginia*, &c. Thus much of Eclipses.

That Astrologie wanteth not Demonstration.

THE grand unhappiness Astrologie this day labours under, (next unto the abuse it suffers by Ignorants pretending to it) is, the Antagonists belief that it is not to be demonstrated, as Geometry and other parts of the Mathematicks. I acknowledge there are many things therein, very difficult to understand, and also to make plain, to prejudicate persons especially: but this maketh not the Art indemonstrable to those of a season'd understanding, and more gentle enquiry. There are certain *Nodi* in this Art, (besides those Meridional and Septentrional, that attend on each Planet) which require curious care to untie; and profundity of judgement, and large experience, either to censure or commend. I shall therefore make this following Essay toward the proving of it demonstrable; and (for Method sake) shall first enquire

what Demonstration is.

REtoricians call it *apodictic*, and tell us, it signifies an evident proof made of any thing in question: and they derive it from *apodicticum*, which is evidently to shew or prove, by Reasons and Arguments drawn from a general Experience of the certainty of the matter or thing defended. For the better Explanation of the term, according to the Definition, I shall offer this Distinction: *Demonstration* is either *probable* or *real*; (i. e.) perspicuous either to the Sense or Reason.

That Astrologie is demonstrable.

It is then said to be Real, when it conspicuously convinceth the Sense, and maketh things doubtful appear, to its undeniable satisfaction: as, Twice Two, make Four.

It is then said to be Probable, when it affords a genuine proof of the matter in question, and therewith satisfies the Reason of man, although the Sense have no apparent knowledge thereof. In this later sense, the Magnitudes and Distances of all superlunary bodies, the Antipodes, the *motus terra*, &c. are onely demonstrable: for the Sense herein is no manner of way concerned; neither can it receive any proof or demonstration thereof at all, but as it is a handmaid to Reason. If then the demonstration of the greatest things be but probable, and yet contentive and satisfactory to the most noble part of man, his Reason; Astrologie is not to be less, but the more honoured, for not coming within the perimeter or cognizance of his brutish part, *viz.* Sense.

This premised, I shall proceed to several Arguments which prove Astrologie demonstrable: and the first I shall propound, offers it self from the Definition, &c. thus—

1. If Demonstration be by Reasons and Arguments evidently to prove, and those Reasons and Arguments to be drawn from a general Experience of the truth of the thing in dispute; then is Astrologie demonstrable, and may lay as large a claim to Demonstration, (as it relates to the first part of the Distinction) as any Art whatsoever.

Sed verum prius: Ergo, &c.

This Argument (I conceive) stands in need of no further support, it being grounded so closely on the Definition: or if it should be thought to do so, the following Arguments will strengthen it.

2. That Science which hath been proved certain and true, from the Experience of all ages, cannot but be demonstrable.

But Astrologie hath been so proved: *ergo, &c.*

That Astrologie hath been so proved, I need onely refer you to the Works of those learned men, *Bellantius, Cardan, Argol, Sir Chr. Heydon, Rantzovius, Junstine, Gauricus, Garceus, Origanus, &c.* all which most eminently prove the same, and that as well from their own Experience, as that of the best knowing in former times. Consider further, its certainty in Physick,

That Astrologie is demonstrable.

sick, Husbandry, Canicular days; in Eclipses, in the death of children born in the eighth month, general accidents, *cum multis aliis, &c.* and we need not be beholding to any but our own experience, to prove it demonstrable. I allow, many times errors do happen in Predictions and Calculations also: but this is, *non ex Scientia imbecillitate, sed Professorum.* The Artists ignorance and insufficiency ought not to bring contempt upon the Art. For (as the learned *Burton* saith) *Ars vera est, sed pauci Artifices reperiuntur.* Besides, there is no Science in the world, that can boast of an absolute perfection. Doth the Logician always prove? the Rhetorician always persuade? the Physician always cure? If no; I cannot in reason see (as my honoured friend *Capt. Wharton*, in his *Ephemeris* for 1655. hath learnedly urged it) why Astrologie should be contemned or slighted for want of perfection, more then all other Arts.—“What Geometrician can stand up, and truly tell me, he hath found out the exact Quadrature of a Circle, or the Duplication of a Cube? What Algebraist can resolve the so long-sought Equation of three discontinued numbers in Algebraick proportion? and should those noble Sciences therefore be rejected as vain?—when nevertheless we cannot but confess the most excellent and daily use made of Geometry, both at sea and land: very well knowing that the Geometrician can Square a Circle (though not precisely, yet) so neer exactness, as leaves the issue of his endeavour without sensible error? Thus far this learned Author.—Now then, if Astrologie (as those other Sciences mentioned) in some trivial things happen to be either dark, or deficient, shall it be deem'd less demonstrable; whenas in the most eminent and useful parts thereof, Experience proves it certain and serviceable?

3. The Art which by quotidian experience discovers the reasons of the different fancies, faces and inclinations of men, is demonstrable.

But Astrologie doth so: *Ergo, &c.*

The Major is unquestionable; the Minor I fortifie thus—The reasons of the different fancies and faces, &c. of men, must either be known from the influence of the Stars, or some other way.

But they are discovered no other way whatsoever: *Ergo, &c.*

Astro-

That Astrologic is demonstrable.

Astrologic (which treateth of the influence of the Stars) maketh it appear that those born under *Saturn* are generally swarthy of countenance, and of looks unpleasant; of disposition serious, malicious, timorous, and envious, &c. Under *Jupiter*, pleasant and ruddy; faithful, just, prudent, &c. &c. *Et in aliis*. Now if the same kinde of person for description and disposition were born under *Jupiter*, as is under *Saturn*, it were a tolerable Plea against the verity and demonstrability of Astrologic: but that is never so; of which Experience is a grand evidence: Astrologic must therefore be demonstrable. Neither let it be deem'd a reasonable Objection, that in *Aethiopia* persons born under both Planets are black: for as among Whites, so Blacks, some are more beautiful then others; and as with us, those born under both Planets are white, yet comparatively, the one shall be esteemed black; so, one there (though they be all black) shall be deem'd more beautiful then the other. For Beauty and Blackness (in this sense) are so termed, either from the hair or complexion, which in persons both in *Aethiopia* and *England* are apparently seen to differ. It is not my business to seek after the Philosophical cause of these differences, here, viz. why we should be White, and the Indians and *Aethiopians* black; neither doth it make to my Argument, so long as it is proved, that among Blacks, some are more or less beautiful then others. Let Physicians discuss, Whether the difference between Blacks and Whites proceeds from the different heat of the Sun; or from the paucity or plenty of Sulphur, as the Chymists urge; or from the nature of the Country, or colour of the Seed. Let it (I say) proceed from whether of these causes it will, yet will Astrologic (as it discovers the differences of both kindes) appear demonstrable.

The learned *Gassius* hath this passage from *Damascen*, lib. 2. cap. 27. *Alii & alii Planetae diversas complexionis & habitus & dispositiones nobis constituunt*. And it is the opinion of the noble Lord *Bacon*, "That from the predominancies of the Planets, the natures and dispositions of men are (not without truth) distinguished. *Advanc. Learn.* p. 352.

4. That Art by which men are enabled to predict the times of the principal accidents of particular persons (as Preference, Sicknes, Death, &c.) is demonstrable.

That Astrologic is demonstrable.

But by Astrologic men are enabled so to do: Ergo, Astrologic is demonstrable.

The Major is not to be denied. The Minor I strengthen thus — That the Stars have an influence upon humane bodies, Physicians and Philosophers grant. That Sicknes, Preference, Death, &c. are accidents both common and proper to men, no one will deny. If then the Stars have an influence on humane bodies, it disposeth them to such and such accidents, at such and such times. Men by Astrologic may therefore come to know them. But I shall be more particular in my proof hereof, both by Authority and Examples. The learned *Scotus* discoursing of Astrologic, *Lib. 2. de generat. scilicet. Hoc modo etiam innotescit, quod qui scire virtutem Signorum, & Stellarum in eis positarum dum nascitur, res aliqua, posset prognosticari de tota vita rei generatae, &c.* After this manner it happeneth, that he who knoweth the vertues of the Signes, and the positions of the Stars, may by the Nativity be enabled to discover the accidents of the whole life of any one. But as come to Examples. The learned Dr. *Brown* (a great enquirer into the truth of these things) was not content to be acquainted with the Theorick, but attempted the Practick part thereof also; and this not in vain; but to the eminent honour of Astrologic: as may appear by what he asserts in *Relig. Med. sect. 23.* — "If (saith he) there be any truth in Astrologic, I may outlive a Jubilee: as yet, I have not seen one Revolution of *Saturn*, nor hath my Pulse beat thirty years. — And this learned Author hath lived more then a Jubilee, viz. fifty years, and by Experience found the Rules of Astrologic certain. *Jundine* a Monk predicted his own death. *Morinus* (late of France) did the same. *Garricus*, &c. acquainted *Picus Mirandula* (who for his fiery zeal in writing against Astrologers, was termed *Flagellum Astrologorum*) that he would die when the Ascendent came to the body of *Mars* by Direction; which was in the 33 year of his age; and then he died. The Bishop of *Vienna* Astrologically predicted unto Don *Frederick* (then serving the Duke of *Burgundy*) that he should be King of *Naples*; and this twenty years before it happened. Besides, I can assert it of my own experience, that the Ascendent, Sun or Moon, being directed to the Conjunction, Quartile, or Opposition of *Mars*, in fiery or dry Signes; in youth always produce the

That Astrologie is demonstrable.

the Small Pox ; in grown years, the Fever or Plague ; in old years, or Climacterical or Eneatical years, Death. Chiefly, if *Mars* have any dignities in the eighth or fourth Houses of the Nativity, or in the places of the Luminaries therein.

I had almost forgot, that of late years, the prediction of the King of Sweden's death, and of the King of Denmark's Recovery of his former state and glory, and of the return of our gracious Sovereign, did not meanly exalt the honour of Astrologie, and evince its certainty. *Vide Nuncius Astrologicus*, and the King of Sweden's Nativity, and my Almanack for 1660. May's Observations therein. Thus then it is apparent, that the Minor of this Argument is sufficiently fortified, both by Authority and Experience ; and thereby the Consequence made good, — *That Astrologie is demonstrable.*

5. The Art which assisteth us in predicting the grand accidents of the world, (as Wars, Famine, Pestilence, &c.) is demonstrable.

But by Astrologie we are assisted to predict such things : *Ergo, &c.*

The Major is not liable to question. The Minor is thus defended.

If the Stars be causes of such grand accidents, then may men by Astrologie foretel them ; they being necessary and certain effects of such causes.

But the Stars are causes of such accidents : *Ergo, &c.*

Origen saith, — *Cœlum instar libelli expansi est, notis Syderum omnia futura in se scripta continentis.* The learned *Zanchy* speaking of this subject (less obscurely) saith, — *Quædam vero sunt, quæ certam & plerumq; necessariam cum Cœlis & Astris habent connexionem, uti sunt res actionesq; omnes in mundo, quæ nullo pacto à voluntate profisciscuntur, &c.* That there are certain other things, that have a necessary connexion with the Heavens and Stars, with which our Will is not concerned, viz. Sterility, Fertility, Plague or Sickneses, perturbation of the Air, Commotions of the Elements, Earthquakes, &c. *Vide Zanch. de Astron.*

Strophlerine foretold great Mutations to happen in the world in 1524. and they fell out true ; albeit that infamous fellow *Aretine*, most unworthily scoffed at him for his labour.

Regiomontanus foretold the many and wonderful Changes that

That Astrologie is demonstrable.

that happened in 1588. and this 113 years before, viz. in 1475. It is apparent therefore that the Stars are causes of such accidents ; and by Astrologie they may be predicted. And thus the Truth inculcated by the Prosyllogism is made good, — *Astrologie is demonstrable.* I could produce other Examples and Authorities also, (not a few) but my designe being not to write a Treatise, I shall forbear.

6. The Art which acquainteth us how wise men come to be out-witted, strong men to be overcome, rich men to be made poor, &c. is certain and demonstrable.

But Astrologie instructeth us in these things : *Ergo, &c.* Not to cite any far-fetch'd Examples, as of *Nero, Tully, Julius Cesar, &c.* of whose different Fates, (with the reasons of them) you may read in my *Collectio Geniturarum* ; let it be remembered, that the History of our late miserable times is sufficient to furnish us with instances enow, to prove this Argument firm and good. We need remember no more, then wise *Strafford*, glorious *Laurel*, *Duke Hamilton, &c.* and of late, the Kings of *Denmark, Sweden, and Poland* ; *Marquise, Richard Cromwel, Lambert* : (nay, we may take in that pack of hell-bred Miscreants, that sate as Judges upon our gracious Sovereign King *Charles the First*) — All of which, were either Wise, Strong, or Rich ; yet could not avoid their being out-witted, overcome, or made poor. Which Examples confirm the Wise-mans words, — *There is a time for every thing* ; and *The race is not always to the swift, &c.* although most commonly it happen so. And inasmuch as the several Unhappineses to the several persons mentioned, were Astrologically predicted, (to my knowledge, the most of them have been so) it proveth unto us the more eminently, — That

Astrologie is demonstrable.

And the more demonstrable Astrologie is, the greater is Gods power seen, and made manifest : — for, *The heavens declare the glory of God. Psal. 19. 1.*

Thus have I prov'd Astrologie to be
 Demonstrable; and now would gladly see
 The counter-reasoning of its greatest Fo,
 (In Zeal and Passion) prove it is not so.
 A Negative is quickly made appear,
 By him whose brains are like to Bottle-Beer:
 And he that unto REASON is a Stranger,
 May Prove, and Reprove, without Fear or Danger.
 But know, fond Zoilus, Negatives, in Schools,
 Do not admit of Proof, unless from Fools;
 who, in despite to Truth, (resolve to outface her)
 Ope urge Impossibles, for to disgrace her.
 Be therefore silent, Momus; lock thy jaws,
 That ope are set, against Urania's Laws.
 Astrologie's divine, and of such worth,
 The Pen of Man's too poor to set it forth.
 "It is an Art, all Mankind may befriend;
 "'Tis Noble in its Name, its Use, its End.

A D V E R T I S E M E N T.

THe Collection of Nativities, so oft by me promised, is now
 delivered from the Press. It contains an hundred and fifty
 choise Genitures, viz. Princely, Prelatical, Causidical, Physi-
 cal, Mercatorial, Mathematical; of Short life, Twins, &c. Be-
 ing of Practical concernment to the Sons of Art. Together
 with An hundred select Aphorisms, pertaining to Nativities.
 Intended as a Supplement to the Doctrine of Nativities. The
 Epistle thereof contains A modest Defence of Astrologie, against
 the pretences of its common Opposers in these days.

The Art of Astrologie, in all the parts thereof, is taught
 by the Author of this Book.

JOHN GADBURY.

Aug. 26. 1662. From my Studie
 in Aldersgate-street, over against
 the Half Moon.

FINIS.
